BEFORE INSTALLATION YOU NEED TO PURCHASE:
1 X 1A AUTOMOTIVE BLADE FUSE (COLOUR: BLACK)
1 X INLINE FUSE HOLDER (TO TAKE BLADE FUSES)

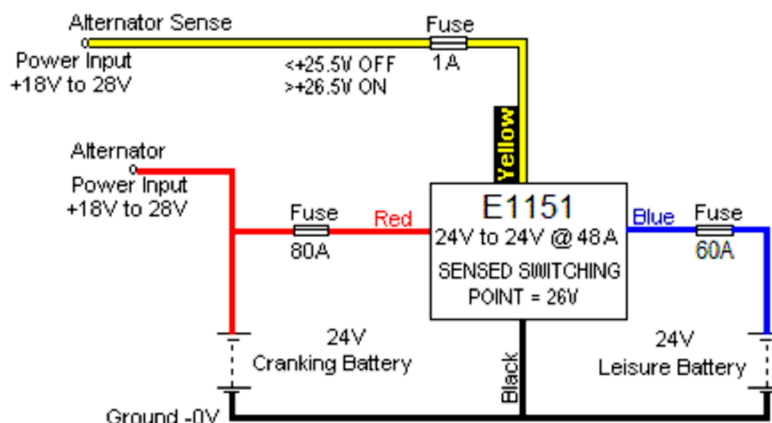

RECOMMENDED MINIMUM CABLES SIZES:
INPUT (RED): 16mm² CONDUCTOR CROSS SECTION (126/0.4mm)
OUTPUT (BLUE): 16mm² CONDUCTOR CROSS SECTION (126/0.4mm)
GROUND (BLACK): 16mm² CONDUCTOR CROSS SECTION (126/0.4mm)
CONTROL (YELLOW): 1.5mm² CONDUCTOR CROSS SECTION (21/0.3mm)

The Charger starts when the voltage reaches approximately 26V.

Wired as a fully automatic Battery Charger

The Yellow Control Wire connection is wired directly to the +ve Connection of the 24V Cranking (Donor) Battery to switch the Charger on and off automatically. In this case the Control Wire senses the 24V Cranking (Donor) Battery Voltage and switches the Charger on only when the 24V Cranking (Donor) Battery is being charged.

The Unit automatically controls the maximum charge into the 24V Leisure (Recipient) Battery preventing it from becoming over-charged / damaged and prevents the 24V Cranking Battery (Donor Battery) from becoming flat / exhausted.

Wired as a manually operated Battery Charger

The Yellow Control Wire connection is wired via a Switch to the +ve Connection of the 24V Cranking (Donor) Battery to switch the Charger on and off manually.

In this case the Operator can control when the Battery Charger is switched on or off. If left on, the Unit will automatically control the maximum charge into the 24V Leisure (Recipient) Battery preventing it from becoming over-charged / damaged and prevent the 24V Cranking Battery (Donor Battery) from becoming flat / exhausted.

This Battery Charger has been designed using a building block system to obtain the power needed to suit your requirements

This Unit can be provided with a Charging Indicator.

To request a Charging Indicator, please add an "L" to the Part Number, i.e.: E1151-L
